INTRODUCTORY

TO OUR PATRONS, ARCHITECTS, BUILDERS AND DEALERS:

We respectfully present this our latest Catalogue.

The favor with which "Northrop's" Stamped Steel Ceilings and Walls have been received in this country and abroad, has stimulated us to higher artistic effects than ever before attained, which we know will be appreciated by the discriminating class, who desire the most artistic architectural finish for interior decorations.

These goods are used extensively in the best buildings of all classes: Hospitals and Institutions, Churches, Schools, Theatres, Lodge Rooms, Halls, Business Buildings, Warehouses, Stores and Private Residences. They meet the demand for a durable, decorative and incombustible interior finish. The acoustic properties of a room are greatly improved when lined with stamped metal. Sounds are not re-echoed as with solid construction.

Ceilings of all shapes and sizes have been very successfully treated with our goods, and the large variety of patterns permits of many different arrangements not possible to be shown in a catalogue.

If our correspondents will send us the necessary particulars about the room to be ceiled we will be pleased to submit drawings for same.

Our ceilings have all the improvements in construction and refinement of design which long experience has proven desirable, and are better than ever before. Experience and more highly perfected machinery have made them better.

The joints are simply perfect and practically air tight, being formed either through a neat ornamental beading as in the panel patterns, or along appropriate lines of the design as in the continuous patterns.

The material is the best quality of mild steel, No. 29 gauge, cold rolled, soft annealed and free from scale.

The painting of the ceilings before being shipped is done with pure white zinc, linseed oil and turpentine, on each side *after* stamping and trimming, leaving no raw edge for the rust to start. The lasting quality of a steel ceiling depends entirely on this priming coat of paint.

Particular attention is called to the curved mouldings so often necessary for high grade work.

The advantages of steel ceilings as a substitute for wood and plaster scarcely need comment. The expense of repair, the danger and annoyance of falling plaster have demonstrated their necessity. They possess every advantage over all other forms of ceiling material as a protection against fire, water, dust and vermin. They will not shrink, warp or crack.

Our ceilings and side walls combine these essentials in handsome and artistic designs that are elegant in appearance, yet so simple and practical in construction that at most any person of any mechanical ability can readily apply them. The large number of repeated orders from distant points and foreign countries go to prove this.

The illustrations following show the single plates, borders, mouldings, coves, etc., to a uniform scale of 1 inch to the foot; and the groups of patterns shown in combinations to the uniform scale of ½ inch to the foot.

Your correspondence is solicited.

40 CHERRY STREET, NEW YORK CITY

ORDERING AND PUTTING UP CEILINGS

WHEN writing for a design or ordering a ceiling, mention all of the particulars necessary for planning it. If the Architect's plan or a diagram of the room to be ceiled is furnished give all distances from wall to wall, the size and shape of all offsets, openings and irregularities, the location of fixed chandeliers, also show any girders, giving their actual size and construction. Mention how large a cornice is desired, and if there is space above the windows and doors for it to extend all around the rooms. With these particulars we will be able to submit a sketch for approval.

More satisfactory results are obtained if some choice of design is indicated when inquiry is made, and the purpose for which the room is used stated.

Working plans showing the arrangement of ceiling material shipped are furnished in all cases where diagrams of the rooms to be ceiled are furnished us. These plans show the exact spacing for the furring strips, method of applying the material and list of items for each room. The measurements given on plan are from centre to centre of furring for the plates and to the edges of the mouldings and cornices.

PUTTING UP THE CEILING:

The furring strips generally used are 1"x2", and should be spaced as indicated on the plan as the patterns require. The furring is first put crosswise of the joists, then short pieces are fitted in between the first for the end of the sheets (see cut showing arrangement of furring on page 50), all to be flush and level; the ceiling patterns are then put up in the central part first, next the cornice and last the border and filler, all to be carefully nailed with 7/8" wire nails.

In order to have the pattern match continuously around the room, cornices should be mitered at all angles by the man erecting the ceiling. Stock miters are not furnished, as the patterns cannot be made to match.

Side walls to receive metal should be sheathed solid up to above the heighth of the shoulder; furring can be used above this if desired for economy. Old plaster or wood ceilings do not need to be removed as the furring strips for the metal will support it, long nails being used as may be required to reach through into the beams.

Blocks or brackets for cornices or mouldings, are furnished with such patterns as require them.

Furring strips are not included in prices, unless specifically mentioned.

FREIGHT:

Freight, owner's risk; less than carload is 5th class.

The weight of our goods is 54 to 60 pounds per 100 square ft. net, or 65 to 75 pounds, boxed for shipment.

TOOLS:

The usual tools are a hammer, saw (for the furring strips), chalk line, punch, nail set, and tinner's shears.

CLAIMS FOR ERRORS:

Claims for errors must be made promptly on receipt of goods. Count the items and compare with the invoice or with the list of items on the plan.

GOODS RETURNED:

Goods of regular size and pattern may be returned within 30 days if in good order, at the price charged less the freight and cartage for returning.

TERMS:

Thirty days net, 2 per cent. discount for cash in 10 days from net amount of invoice.

Orders from patrons not favorably rated will be shipped to our order and draft with bill of lading will be sent through bank for collection.

BILLS:

Bills not paid at maturity are subject to sight draft without further notice.

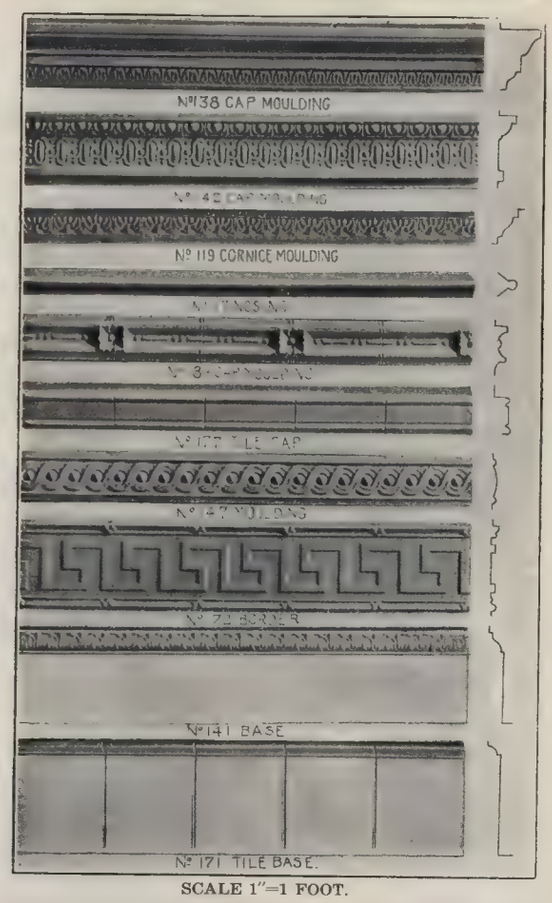
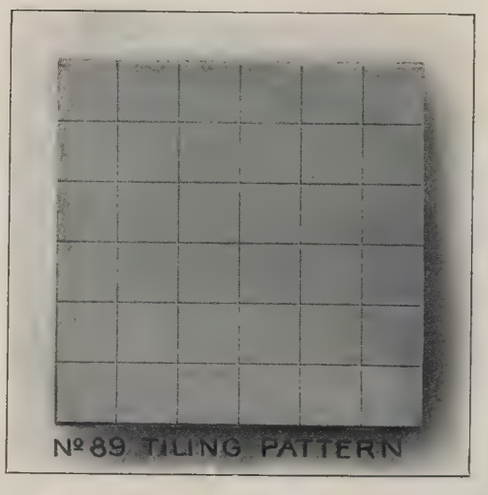
Nº 70 CENTRE PANEL 8'-1" × 8'-1"

DESIGN No. 70. Code Word, JIPOTANIR.
Centre Panel; 8′ 1″x8′ 1″; composed of 16 parts and 1 Rosette No. 512.
DESIGN No. 70 A. Code Word, JIPUTINOR.
8″ 1″ diameter; composed of 12 parts and 1 Rosette No. 512.
This Centre is most excellent stamping and is often used in connection with many of our patterns for large, high ceilings, such as Churches, Theatres, Lodge Rooms, etc.

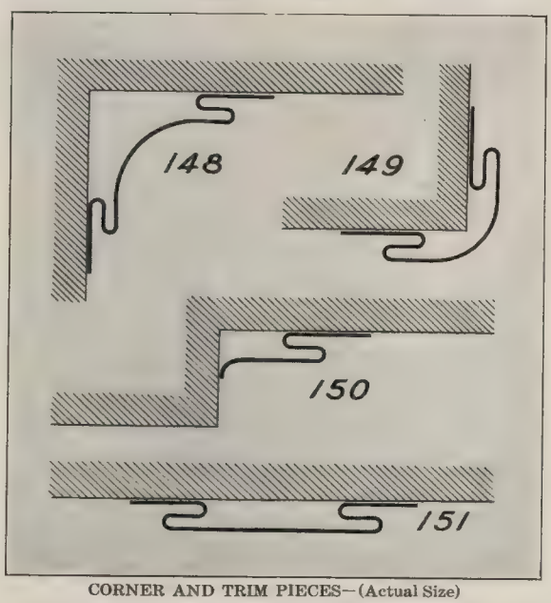
Nº 88 TILING PATTERN



SCALE 1"=1 FOOT.



Nº 89 TILING PATTERN



CORNER AND TRIM PIECES—(Actual Size)

No. 88	Tile 4" x 4"	Sheet 2" x 3"	Code JOHAMA
No. 88	Tile 4" x 4"	Sheet 2" x 4"	Code JOHEM
No. 89	Tile 4" x 4"	Sheet 2" x 3"	Code JOHIDO
No. 89	Tile 4" x 4"	Sheet 2" x 4"	Code JOHIN

Also made in lengths up to 8 ft.

The patterns 74 and 75 extend horizontally along the walls. The other patterns are usually placed vertically on the walls.

No. 72 6" and 8" wide. No. 141 and 171 are 4", 6" are 8" high.

In asking for estimates, please give Pattern Numbers, with sketch of sidewall showing the combination desired.

The size, length and height of *each wall* to be tiled should also be given exactly and if there are any irregularities, openings or offsets to be allowed for, full descriptions of these irregularities should also be given.

The surface to be tiled should be sheathed with ½ in. boards, narrow and dry. Spaces may be left between them, provided there is wood back of the joints of the sheets. All the Caps, Bases and Moulds have flanges, and these are to be put on before the tiling sheets.

The special nail has a thin head, invisible when painted. It is to be driven through at the intersections of the joint lines and should be "set" without bruising the metal.

No-Co-Do Tiling is not only the most satisfactory substitute for real tiling in bath rooms and kitchens of homes, but it is also especially suited for use in schools, hotels, restaurants, hospitals, stores, offices, churches and large buildings of *all* kinds.

Florists, butchers, cold storage houses, dealers in cigars, and any other products which are affected by odors, moisture, etc., will also find No-Co-Do Tiling the ideal Wall Covering as well as the most economical.

The No. 148 is for the inner corners of the room. No. 149 is for the outer corners. No. 150 is to finish along any door or window frames. No. 151 may be used for the vertical joints of patterns No. 74 and No. 75. They are nailed on by their flanges, before the tiling sheets, and after the base and cap moulding are in place. The use of these trim pieces saves many nails through the Tiling. Made in various lengths up to 6 feet.

Scale of the illustrations is 1 inch per foot.

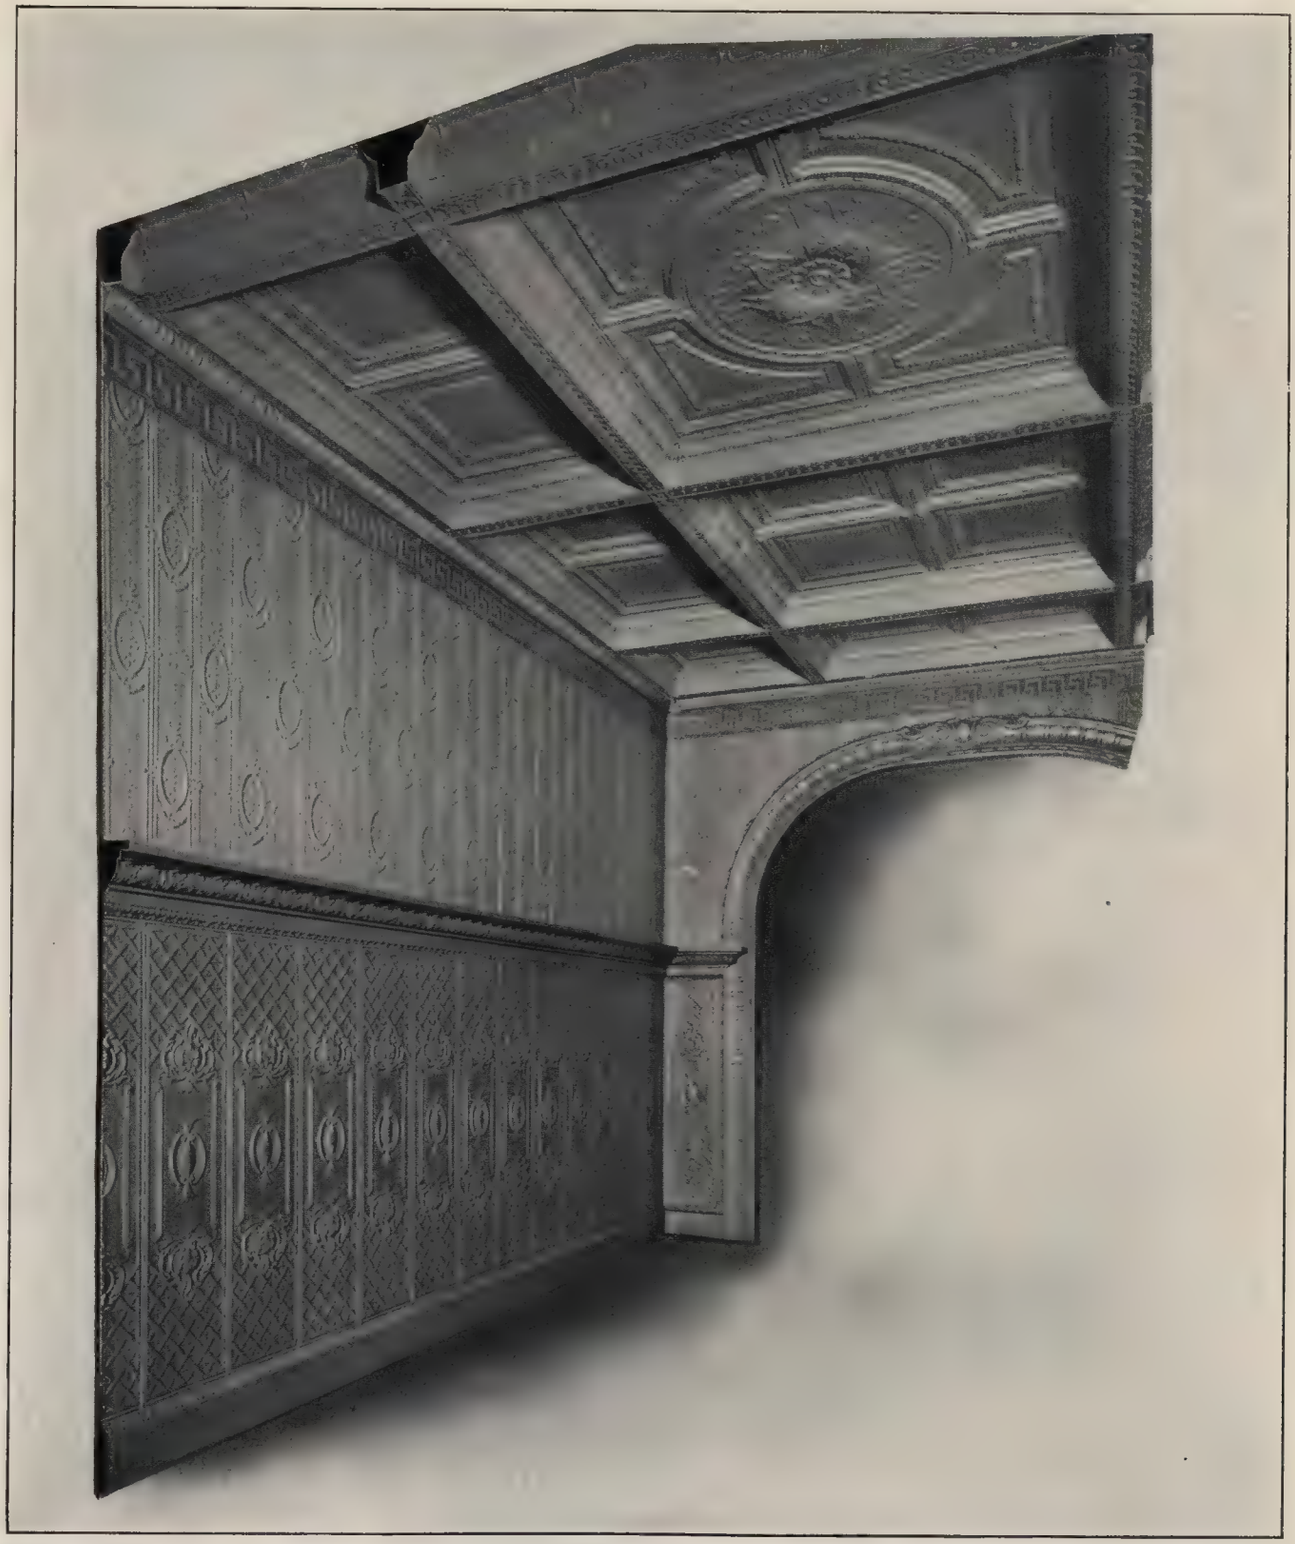
76	3" x 3"	2' x 3'	JOHOBO
76	3" x 3"	2' x 4'	JOHOBAN
77	6" x 6"	2' x 3'	JOHUTAN
77	6" x 6"	2' x 4'	JOHUTER

Also made in lengths up to 8 feet.

In the Bath Room above we show No. 72 Frieze, No. 76 Wall, No. 142 Cap, No. 77 Wainscot and No. 141 Base, and the Kitchen is No. 74 Wall, No. 75 Wainscot and No. 72 as Chair Rail.

It is not necessary to use two different patterns.



The above cut shows a corner of our show rooms and illustrates Ceiling design No. 243 as shown on page 33, and Side Wall design No. 246 as shown on page 47. Ceiling is of No. 26 Panels; No. 23 Center panel; beam No. 146; and Cornice No. 145 with intersections, Side Wall of No. 95; Frieze No. 72; Wood Shelf and Mouldings No. 126 and 141; with No. 97 Wainscoting.

This is a very appropriate arrangement for Hall, Dining Room, Den or Library or for larger rooms by dividing the space into larger sections with the beam moulding.

UPPER HALF DESIGN Nº 261 LOWER HALF DESIGN Nº 263

CENTRE Nº 549

DESIGN No. 261. Code Word, JUGLAM.

Composed of No. 41 Field, No. 71A Border, 12" wide, No. 71B Corner, No. 144 Moulding with Curved Corner and No. 144 Ells, No. 143 Moulding and No. 65 Cove.

DESIGN No. 263. Code Word, JUNO.

No. 41 Field, No. 43 Border with Wreath Ornament, No. 144 Moulding with Curved Corners and Ells, and No. 143 Moulding.

N. B.—The No. 549 Centre is not considered a part of either of the above designs, and if desired should be especially mentioned. The No. 70 Center as shown on page 13 is less expensive and can be used very nicely with either design. It is the same size across—8 feet.

No. 549 CENTRE. Code Word, KOIN.

This Centre is composed of the two set curves of No. 144 Moulding with Rosette No. 530 in centre and No. 518 in outside circles. It is 8 ft. across. For shipment this would be sent in parts very simple to assemble.

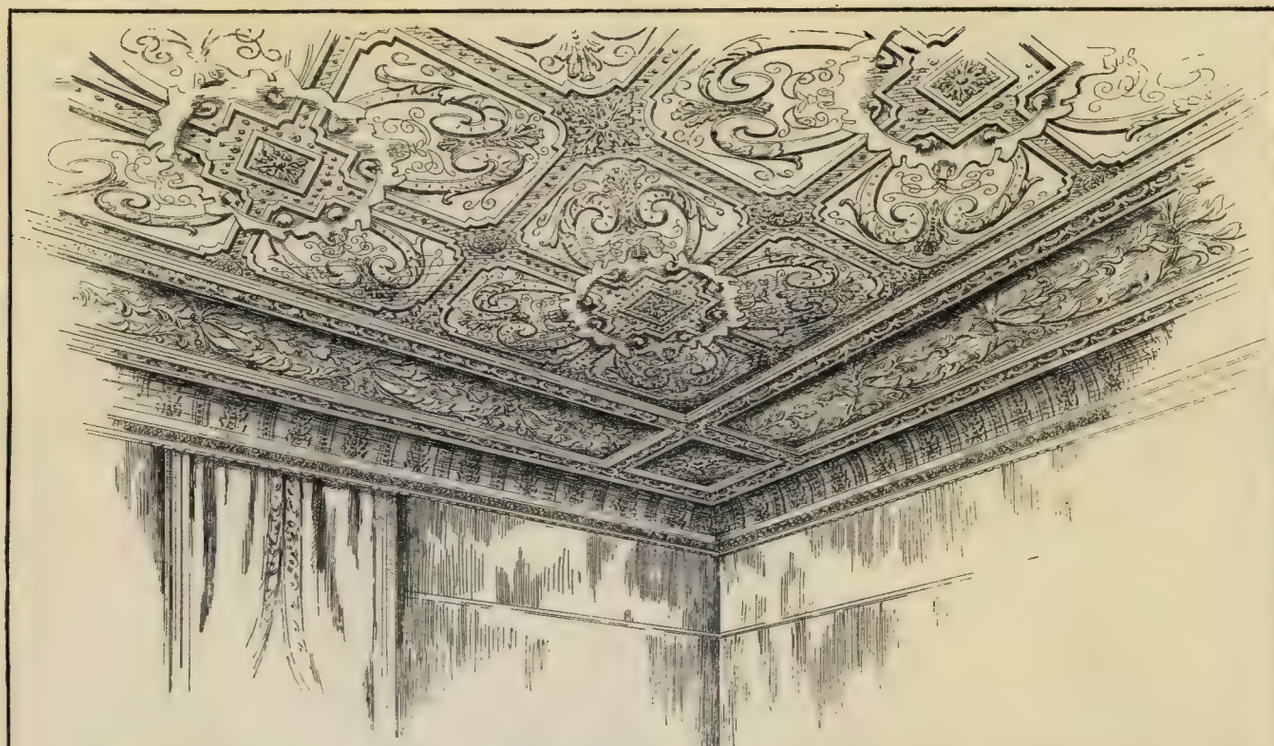
DESIGN No. 247 Code Word, JOUNCING.
No. 142 Cap; No. 29 Panel; No. 141 Base.

Scale, ½ inch=1 foot.

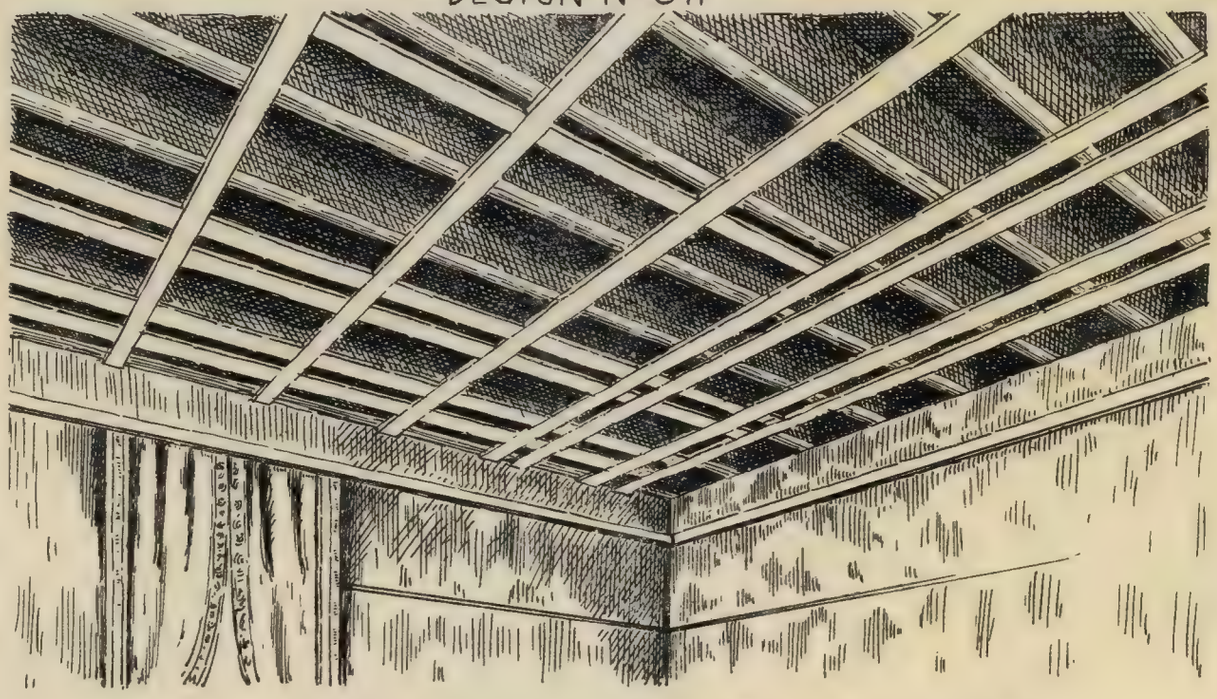
The above illustration is the interior of St. Leonard's R. C. Church, Boston, Mass., and shows our Steel Ceiling in the nave, trancept, dome and altar, with large curved mouldings.

This as well as the Fort Lee Ferry House (see cut on opposite page), where we show our metal work on both ceiling and side wall, as well as the trim, window caps, etc., are done from Architect's details, which we carefully follow. Or we will be pleased to furnish our own sketch and suggestions for this grade of special work.

The cuts above shown demonstrate the possibility of Stamped Steel and how it can be utilized to the very best artistic and practical advantage. The examples of church work show two different forms of ceilings that are very popular, but on account of their shape are not usually finished with metal. These mouldings and ceilings in metal do not weigh one-tenth that of plaster, and would last forever. They are so light that it would not affect the weakest truss if put over old plaster. *We make a specialty of church work.* Each church requires a different treatment. We have come in contact with all shapes of ceiling, but have never yet found one that could not be artistically treated at reasonable cost by giving the subject careful thought and study. The clergyman, the organist and choir, are all pleased with the acoustic properties of metal ceilings.



DESIGN Nº 311



SHOWING FURRING STRIPS FOR CEILING ABOVE

DESIGN No. 311. Code Word, JUMBAD.

Ceiling of No. 40 Plates with No. 51 Border, divided by No. 114 Mouldings, No. 64 Cove Cornice and Foot Moulding.

We show here the necessary Furring for Ceiling Design No. 311. The Furring Strips are first put across the joists, then short pieces are fitted in between the first for the end of the Plates, all to be flush and level. The figures on plan are from centre to center of Furring Strips, and are from the joints of Plates and edges of Mouldings. It is best to lay out the work from the centre of the room working in both directions. For further instructions see page 3.

TELEGRAPH AND CABLE CODE

FOR METAL CEILING MATERIAL AS ILLUSTRATED HEREIN

LEIBER'S, WESTERN UNION, A B C CODE, 5th EDITION, OR ANY OTHER WELL-KNOWN CODE MAY ALSO BE USED FOR EXPRESSIONS NOT PROVIDED FOR IN THIS PRIVATE CODE

THE NUMBERS under the illustrations of the Catalogue indicate the patterns and size thus:

If the Code Word, *Joyless*, is used it refers to No. 36 plate, 24"x24"; while if the word *Judia* is used it would indicate a sheet 24"x96" of No. 36 plate.

If *Javelin* is used it means a Ceiling of patterns illustrated by Design No. 205.

All of the Ceiling Plates, Panels and Patterns are referred to by the piece and should be ordered by the piece, and orders for Borders, Coves and Mouldings should be ordered by the lineal foot or meter and not by the piece.

If the word foot or meter is used with the Code Word we understand it to mean square foot or square meter when applied to Ceiling Patterns, Panels or Plates, and lineal foot or meter when applied to the Borders, Coves and Mouldings.

Ft. stands for feet, and *in.* for inches. *Met.* stands for meter, and *cemt.* for centimeter.

Dimensions of Ceilings are presumed to be in feet and inches unless the Code Word for meter is used, and are to be written by the Code figures, as follows:

CODE FOR FIGURES:	1	2	3	4	5	6	7	8	9	0	10
	ba	*be*	*ca*	*co*	*da*	*de*	*du*	*ga*	*ge*	*ho*	*hu*

A size 14 ft. 10 in. x 53 ft. 2 in. is expressed thus: *bacofthuin by dacaftbein.*
A size 17 ft. 9 in. x 28 ft. 4 in. is expressed thus: *baduftgein by begaftcoin.*
A size 10 ft. 5 in. x 20 ft. 0 in. is expressed thus: *bahoftdain by behoft.*

CODE FOR ORDERS AND INQUIRIES

Ship=Ship as soon as possible by Freight (or Freight steamer).
Express=Send as soon as possible by Express (or Express steamer).
Expresscod=Send by Express C. O. D.
Shipcod=Ship by freight, draft attached to Bill of Lading.
Quote=Quote price f. o. b. New York.
Quodel=Quote price delivered here (*i. e.*, to R. R. Station or Seaport of inquirer).

EXAMPLES:

Ship as soon as possible by freight 250 sheets No. 97 12"x48" and 192 ft. No. 142 Cap Moulding..... *Ship bedaho Jonathan bagebeft Joyster.*

Express C. O. D. 12 sheets No. 41 2 ft. x 8 ft..... *Expresscod babe Jump.*

Ship by freight and draw with Bill of Lading a Ceiling of Design No. 208 for a room 17 ft. 6 in. x 33 ft. 9 in..... *Shipcod jelly baduftdein by cacaftgein.*

Quote cost delivered at Hamburg for a Ceiling in Design 219 for a room 7.20 meters by 12.65 meters..... *Quodel Hamburg judge dumet behocemt by babemet dedacemt.*

NORTHROP, COBURN & DODGE CO.
40 Cherry Street

New York, October 1, 1910

PRICE LIST B
OF STAMPED STEEL CEILINGS
INCLUDING CORNICES, BORDERS, MOULDINGS AND CENTERS

Substantially as illustrated in the following numbers of our Catalogue No. 10, *boxed and delivered* board cars or boat here.

TO ASCERTAIN THE NUMBER OF SQUARE FEET IN A CEILING

Multiply the length by the breadth, first adding in the distance which it is desired the cornices shall extend down on the walls—and also the sides of any girders that are to be covered. Thus, if a room 20x30 feet is to have a cornice 8 inches deep all around, it would be counted as 21′ 4″ x 31′ 4″—668 feet. No deduction is made for offsets or openings of less than 25 square feet. For larger offsets three-fourths of this space is deducted. *Furring not included.*

DESIGN NO.	PAGE	LESS THAN 500 SQUARE FEET PRICE PER SQUARE FOOT	500 TO 1500 SQUARE FEET PRICE PER SQUARE FOOT	OVER 1500 SQUARE FEET PRICE PER SQUARE FOOT
